

## **Economics 798: Economics of Climate Change**

In the spring of 2010, the Whittemore School of Business Economics will offer you a unique chance to get a deep insight in to the economic issues regarding global climate change. Professor Robert Mohr will lead an upper-level economics class, Economics of Climate Change, which introduces students to the international frameworks and policies to deal with climate change and develops economic models to analyze and compare the consequences of different regulatory approaches. The course explores how climate change relates to issues of non-renewable resources, distribution, development, technological progress and social cost-benefit analysis.

The course is open to all students who have taken intermediate microeconomics as well as graduate students from other departments.

## **Economics 798 (2 credit course): European Policy and Climate Change**

Students who enroll in the Economics of Climate Change (above) have the option of also participating in an extraordinary two-credit course on European Policy related to climate change. Students in this course will travel to Copenhagen, Denmark (host city for the 2009 international climate summit) to meet with Danish and European policy experts, academics, and scientists.

This course is open to all students enrolled in the Economics of Climate Change Course, but will only be offered if there is sufficient demand. Therefore, please contact Robert Mohr if interested. The course requires international travel during the week of Spring Break 2010

Course fee: \$950. Fee covers accommodation, some meals, and all events. Students must purchase airfare separately (we will travel as a group).

For further details on both courses, please contact Prof. Robert Mohr ([Robert.mohr@unh.edu](mailto:Robert.mohr@unh.edu)) or the Chair of the Department of Economics, Bruce Elmslie ([bte@cisunix.unh.edu](mailto:bte@cisunix.unh.edu)).
